; Sequence 31, Application US/08882164D
; Patent No. 6306624

GENERAL INFORMATION:

APPLICANT: Petkovich, P. Martin, White, Jay A.,

APPLICANT: Beckett, Barbara R., Jones, Glenville

TITLE OF INVENTION: Retinoid Metabolizing Protein

NUMBER OF SEQUENCES: 43

seq_name: /cgn2_6/ptodata/2/ina/6B_COMB.seq:US-08-882-164D-31

Sequence 2, Application US/09103840A
Patent No. 6294328
GENERAL INFORMATION:
APPLICANT: FLEISCHMAN, Robert D.
APPLICANT: FRASER, Claire M.
APPLICANT: VENTER, John C.
APPLICANT: VENTER, John C.
TITLE OF INVENTION: DNA SEQUENCES FOR STRAIN ANALYSIS IN MYCOBACTERIUM
TITLE OF INVENTION: TUBERCULOSIS
FILE REFERENCE: 24366-2007.00
CURRENT APPLICATION NUMBER: US/09/103,840A
CURRENT FILING DATE: 1998-06-24
NUMBER OF SEQ ID NOS: 2
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 2

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Its expression is dependent on the presence of retinoic acid (RA). The retinoid-regulated genes such as the inducible cytochrome P450RAI gene specifically metabolises a derivative of the RA. The cytochrome P450 gene in general produces enzymes involved in the oxidative metabolism of endogenous and exogenous compounds. The cytochrome P450 nucleotide sequence can be used to induce or suppress the expression of its protein. P450RAI is highly induced by RA in cell lines and tissues. This allows for development of a drug screen using promoters and nucleotide sequences to identify drugs which are useful for reducing the catabolism of RA.
Retinoid metabolising protein; P450RAI; retinoid oxidase; retinoic acid; mouse; inhibitor; antibody; cancer; actinic keratosis; oral leukoplakia; head tumour; neck tumour;

cells exposed to retinoic acid. Zebrafish, human and mouse P450RAIS (see AAW44159-61) are claimed. They can be expressed in host cells and used to metabolize retinoic acid in an organism or cell, in drug screening, and to raise antibodies useful for inhibiting retinoic acid hydroxylation for the treatment of cancer, actinic keratosis, oral leukoplakia, secondary tumours of the head and/or neck, non-small cell lung carcinomas, basal cell carcinomas, acute promyelocytic leukaemia, skin cancer, and premalignancy associated with actinic keratosis, acne, psoriasis and/or ichthyosis.
                                                                                                                                                                                              This protein comprises a novel mouse retinoid metabolising protein, designated mp450RAI. Its amino acid sequence was deduced from a cDNA clone (see AAV12205) isolated from a retinoic acid-treated P19 teratocarcinoma library. It includes a haem-binding motif characteristic of cytochrome P450 proteins. mp450RAI is a retinoid oxidase that has the ability to hydroxylate retinoic acid at the 4 position of the beta-ionone ring, and is inducible in epithelial cells exposed to retinoic acid. Pebrafish, human and mouse P450RAIs cells exposed to retinoic acid.
                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; Page 65-66; 110pp; English.

                                                                                                                                                                    This is the amino acid sequence of the human cytochrome P450RAI. Its expression is dependent on the presence of retinoic acid (RA). The retinoid-regulated genes such as the inducible cytochrome P450RAI gene specifically metabolises a derivative of the RA. The cytochrome P450 gene in general produces enzymes involved in the oxidative metabolism of endogenous and exogenous compounds. The cytochrome P450 nucleotide sequence can be used to induce or suppress the expression of its protein. P450RAI is highly induced by RA in cell lines and tissues. This allows for development of a drug screen using promoters and nucleotide sequences to identify drugs which are useful for reducing the catabolism of RA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   01-OCT-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This protein comprises a novel human retinoid metabolising protein, designated hp450RAI. Its amino acid sequence was deduced from a CDNA clone (see AAV12204) isolated from a retinoic acid-treated NT2 Ccell library. It includes a haem-binding motif characteristic of Cytochrome P450 proteins. hP450RAI is a retinoid oxidase that has the ability to hydroxylate retinoic acid at the 4 position of the beta-ionone ring, and is inducible in epithelial cells exposed to Cretinoic acid. Zebrafish, human and mouse P450RAIs (see AAW4159-61) Cretinoic acid. Zebrafish, human and mouse P450RAIs (see AAW4159-61) Cretinoic acid. They can be expressed in host cells and used to metabolize retinoic acid in an organism or cell, in drug screening, Creding and to raise antibodies useful for inhibiting retinoic acid hydroxylation for the treatment of cancer, actinic keratosis, oral cell lung carcinomas, basal cell carcinomas, acute promyelocytic cell lung carcinomas, basal cell carcinomas, acute promyelocytic cleukaemia, skin cancer, and premalignancy associated with actinic constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches 464;

Its expression is dependent on the presence of retinoic acid (RA). The retinoid-regulated genes such as the inducible cytochrome P450RAI gene specifically metabolises a derivative of the RA. The cytochrome P450 gene in general produces enzymes involved in the oxidative metabolism of endogenous and exogenous compounds. The cytochrome P450 nucleotide sequence can be used to induce or suppress the expression of its protein. P450RAI is highly induced by RA in cell lines and tissues. This allows for development of a drug screen using promoters and nucleotide sequences to identify drugs which are useful for reducing the catabolism of RA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       닭
                                    This protein comprises a novel zebrafish retinoid metabolising CC protein, designated zP450RAI. Its amino acid sequence was deduced CC from a cDNA clone (see AAV12203) isolated from a 6-18 hr embryo CC library. It includes a haem-binding motif characteristic of the cytochrome P450 proteins. zP450RAI is a retinoid oxidase that has CC the ability to hydroxylate retinoic acid at the 4 position of the Octavione ring, and is inducible in epithelial cells exposed to CC retinoic acid. Zebrafish, human and mouse P450RAIs (see AAW44159-61) CC are claimed. They can be expressed in host cells and used to CC metabolize retinoic acid in an organism or cell, in drug screening, CC and to raise antibodies useful for inhibiting retinoic acid hydroxylation for the treatment of cancer, actinic keratosis, oral C leukoplakia, secondary tumours of the head and/or neck, non-small C cell lung carcinomas, basal cell carcinomas, acute promyelocytic C leukaemia, skin cancer, and premalignancy associated with actinic recompositions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a human protein, designated PSEC64, which is related to neuron growth. The PSEC64 protein and its gene can be used for the development of a preventive agent for use in the treatment of diseases in which nerves are involved.

The polypeptide is cytochrome P450 enzyme that mediates multiple steps in synthesis of brassinosteroids. Specifically, it mediates multiple 2alpha-hydroxylation steps in brassinosteroid biosynthesis. The DWF4 polynucleotide is used for altering the phenotype of a plant. DWF4 plants display a dramatic reduction in the length of different organs, and this size reduction is attributable to a defect in cell elongation. The DWF4 polynucleotides and polypeptides can be used in diagnostic assays and to generate antibodies, which can be used to produce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated dwf4 polynucleotide useful for altering the phenotype of plants, for diagnostic assays and in the production of antibodies -

The hydroxylase can be used to identify brassinosteroids or brassinosteroid inhibitors, useful to produce plants with modified physiological and/or phenotypic characteristics. The modified plants may show, e.g. stimulation of growth, increased cell elongation, increased wood production,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cytochrome P450-type hydroxylase; identification; brassinosteroid; brassinosteroid inhibitor; modified plant; recombinant production;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Arabidopsis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             14-APR-1998

/note-*Organ: brain; Vector: pCMVSPORT 6; 1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-stranded cDNA was digested with Not I and cloned into the Not I and Eco RV sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies. Contact: Feng Liang Life Technologies.
